

TCS Guard Tour

The TCS Watch IP Surveillance solution features Guard Tour - a simple and effective way to keep an eye on your business, all from the convenience of your desk. If you have multiple surveillance cameras installed at your facility, Guard Tour will cycle through the surveillance footage from each camera in real time at specified intervals right on the screen of your Mitel deskphone.

When Guard Tour is combined with the TCS Watch Axis camera solution, motion detections can be pushed to the screen of the Mitel deskphone with the an audible notification. There is no need to have a designated computer for surveillance. Guard Tour makes keeping an eye on your facility easy and convenient while allowing you to remain productive and focus on what's important - your business.

**Convenient
and simple IP
surveillance of
your facility.**

Real time surveillance footage from the convenience of your deskphone.

TCS recommends using Axis cameras for optimal solution performance, however, if you have other cameras already installed at your facility we can perform an assessment to determine if those cameras are compatible with the Guard Tour solution.

EASY & CONVENIENT

Keep watch over your entire facility from the convenience of your desk. Guard Tour sends surveillance footage images to the screen on your Mitel deskphone.

REAL TIME & HIGH QUALITY

Guard Tour cycles through real time surveillance footage from your security cameras. Our cameras are full-featured, high definition cameras that provide high quality images.

INSTANT NOTIFICATIONS

Audible motion notifications can be pushed to your Mitel deskphone so you can be made instantly aware of any activity in your facility.
